BLACK ROT DISEASE PREDICTION

Black Rot is a fungal disease which affects the yield as well as the wine quality and can also cause complete crop loss. It can be identified as brown/tan coloured circular spots/lesions distributed unevenly on the leaf of the plant. A proper detection of the disease is required which can be further helpful in taking active measures like Spraying of Fungicides, Pruning, etc. can be done on time. The Plant Village Dataset is used, which contains images of grape plant leaves affected from Black Rot Disease as well as the pictures of healthy leaves. HSV and $L^*a^*b^*$ colour models are used for the segmentation purposes. The healthy part and the diseased part of the leaves are separated using color-based techniques and the features are stored for each leaf. The color of diseased part is very much different from the healthy part of the leaves which makes it easier to detect the disease on the basis of color. The machine learning is done using the Support Vector Machine Classifier and the results are analyzed on different Kernels of SVM.

MODULES

❖ Expert System

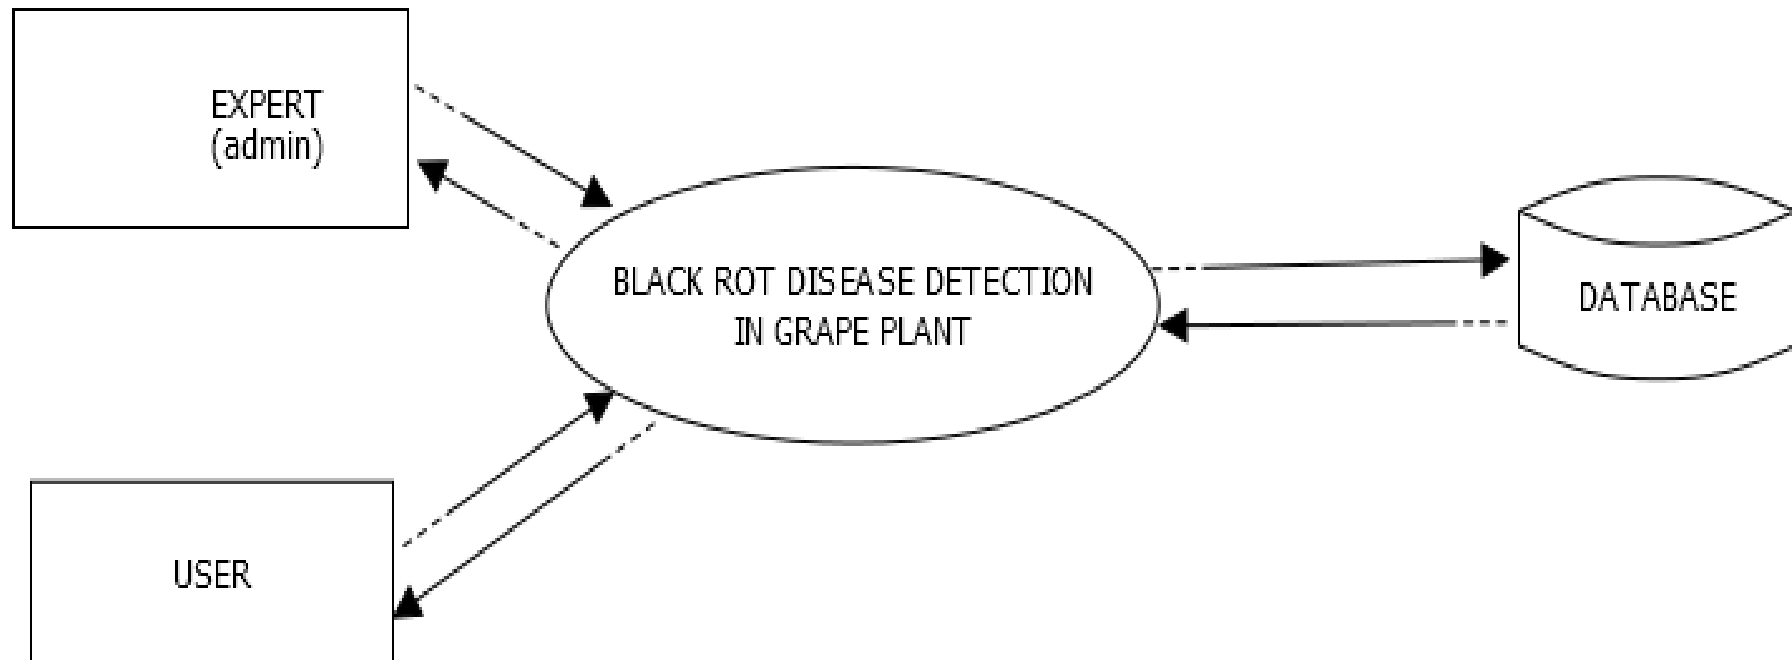

- Login
- Add and manage dataset
- View farmers
- Chat with farmers
- Send notification
- View feedback
- Add fertilizer

❖ Farmers

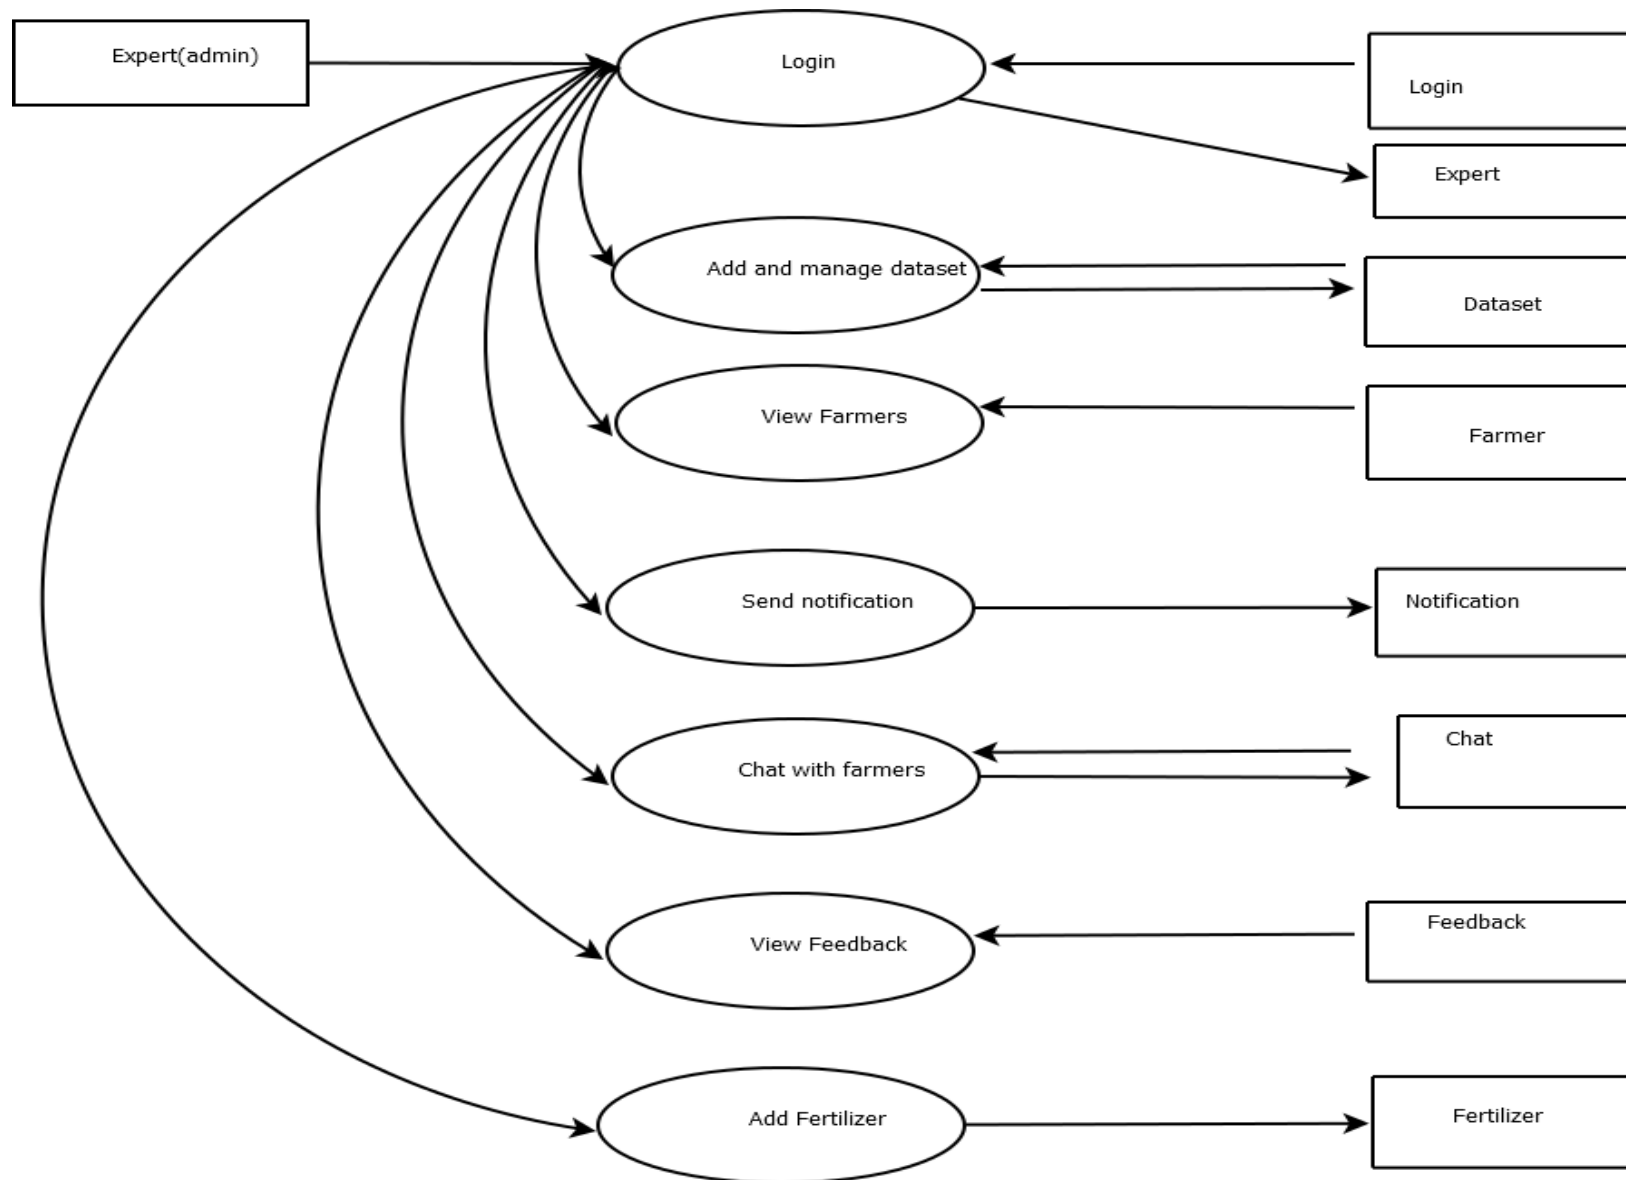

- Registration
- Login
- Upload leaf image & View prediction result
- Chat with experts
- View notifications
- Send feedbacks
- View fertilizer

DEVELOPING ENVIRONMENT

- OPERATING SYSTEM : WINDOWS 10
- FRONT END : HTML, CSS, JAVASCRIPT
- BACK END : MySQL
- Dataset: Plant Village Dataset
- IDE : JetBrains PyCharm, Android studio
- TECHNOLOGY USED : PYTHON, JAVA
- FRAME WORK USED : Flask

PRODUCT BACKLOG

User Story ID	Priority <High/Medium/Low>	Size (Hours)	Sprint <#>	Status <Planned/In progress/Completed>	Release Date	Release Goal
1	Medium	2	1	Completed	8/01/2022	Table design
2	High	3		Completed	8/01/2022	Form design
3	High	5		Completed	8/01/2022	Basic coding
4	High	5	2	Planned		collects the features of the disease
5	Medium	5		Planned		Training the data
6	High	5	3	Planned		classify different leaf images using SVM
7	Medium	5		Planned		find Black Rot disease
8	Medium	5	4	Planned		Testing data
9	High	5		Planned		Output generation

USER STORIES

UserStoryID	As a <type of user>	I want to	So that I can
1	Expert	login	login successful with correct username and password
2	Expert	Add & Manage Dataset	Add disease effected leaf Image to dataset, compare to uploaded image in here to predict disease
3	Expert	View farmer	View registered farmer details
4	Expert	Chat with farmers	Chat with farmers
5	Expert	Send notification	Send notification to user
6	Expert	View feedback	View user feedback
7	Expert	Add fertilizer	Add fertilizer details
8	User	Registration	User can register
9	User	Login	Login successful with correct username and password
10	User	Upload leaf image & view prediction result	Upload image and view result
11	User	Chat with expert	Chat with expert
12	User	View notification	View notification
13	User	Send feedback	Send feedback to expert
14	User	View fertilizer	View fertilizer

PROJECT PLAN

User Story ID	Task Name	Start Date	End Date	Days	Status
1	Sprint 1	26/12/2021	28/12/2021	2	Completed
2		29/12/2021	31/12/2021	3	Completed
3		03/12/2021	08/01/2022	5	Completed
4	Sprint 2	09/01/2022	16/01/2022	8	Planned
5		18/01/2022	22/01/2022	5	Planned
6	Sprint 3	23/01/2022	27/01/2022	5	Planned
7		30/01/2022	05/02/2022	7	Planned
8	Sprint 4	06/02/2022	10/01/2022	5	Planned
9		16/02/2022	19/02/2022	4	Planned
